

Welcome to Brink Genetics' 2021 Bull & Female Offering.

We would like to say Thank You to our customers and visitors from the US and around the world. Our Fleckvieh genetics are in 26 foreign countries along with bordering neighbors Mexico and Canada. It is your input and conversations about your operations that assist us in building Fleckviehs to generate profit for you. This marks our 31th year of breeding Full Fleckvieh. Our 120 head cow herd is of Full Fleckvieh breeding from the German and Austria herd book.

The Fleckvieh demand is strong as new customers try this versatile breed for the first time and are amazed of the benefits it adds in more than one characteristic. Our breeding program is geared towards generating accelerated performance which is achieved through breed strength and the heterosis created due to our purity and bred in performance in our phenotype and genotype genetic makeup. When heterosis and our true genetic performance is in one genetic package an improvement in profitability is achieved. Our genetic strengths compliment most all breeds of cattle.

With our linebreeding program, you as the customer get the big boost in heterosis as well as offspring uniformity. We continue to have customers report 50-143 more pounds at weaning weight as well as bringing the bottom end of their calf crop up to the middle which calculates more profit. As producers, we know complimentary breeding is a must to improve our herds. We feel our Fleckvieh genetics can provide many positive attributes within your herd along with gains in your pocket.

This bull offering maybe the deepest set ever offered. These guys are loaded with muscle on a flexible skeleton and will sire performance along with strong carcass characteristics. On the maternal side, the Brink Fleckvieh sired females will cross well with other breeds and have maternal calving ease with higher weaning weights.

All bulls have been ultra-sounded by the Stauffer program which has given us much accuracy for generations. As you can see in our progeny data from customers, our bulls are siring more muscle, and lower yield grades with a choice marbling score. We prefer raw progeny data evaluation on how our genetics are stacking up in the real world.

All bulls and females offered here are identified diluter free. Which means they WILL NOT throw gray calves from black cows or bulls. There are 46 bulls being offered with one homozygous polled bull (H015) and four heterozygous polled bulls: H026, H027, H083, and H0121. Along with the bulls we will also be offering 12 yearling Fleckvieh heifers with one, H0104 being polled and in addition, six confirmed bred cows.
